Getting Started

1. Take 3, two-second draws to pre-prime cartridge.
2. Lightly twist Kurvana cartridge onto battery.
3. Prime device by taking 3 three-second draws.
4. Enjoy!

Caution

Due to our high-powered CTEC coil, the cartridge will become extremely hot during excessive use.

- Please dose in intervals of 30-60 seconds.
- Soft and short draws are recommended.
- If device becomes too hot, please allow 2-3 minutes for device to cool.
- Do not use an incompatible device to power cartridge.

Recommended Use

We recommend pairing your Kurvana cartridge with our batteries for the best performance and durability. Our batteries are designed for optimal voltage and airflow. We recommend setting other devices to no more than:

3.3-3.7 Volts/11 Watts

Pre-Priming and Priming

Before and after attaching a cartridge to the battery, prime the cartridge by taking 3 slow draws to get the best vape experience. This allows the oil to absorb into the chamber for superior flavor. Failure to set up the device correctly may cause permanent damage to the heating element.

Dosing Considerations

Effects will vary between individuals. Although rapid-acting Kurvana oils are often felt instantly for most, it may take some consumers up to 15 minutes to feel the full effect of our oils. Therefore, we recommend waiting at least 15 minutes before administering an additional dose. The length of an inhalation will also impact the effect.

Micro Dosing

For less experienced and first time consumers, we recommend a starting dose of 3-5 seconds of inhalation. More experienced consumer may require a few doses to achieve their desired effects.

Key Battery Features

- Buttonless
- Automatic Power Voltage
- 350mAh Capacity
- Optimized for High Airflow
- 10 Second Safety Timer
- Quick Charge

Note

Kurvana Buttonless Batteries are not compatible with “top airflow” cartridges offered by other manufacturers.

Device Overview

— Crystal Clear Mouthpiece

— CTEC 2.0

— Gold Plated Positive Pin

— Buttonless Design

— 350mAh Battery Cell

— 6 Unique Finishes

— Optimized for High Airflow

Battery LED Functions

	
<p>Battery in Use Bottom LED (buttonless) turns on.</p>	<p>10 Second Safety Timer LED flashes 10 times when safety timer is triggered.</p>

	
<p>Low Battery Indicator LED flashes 10 times when battery is below 3.3 V.</p>	<p>Short Circuit Protection LED flashes 10 times when faulty cartridge is detected.</p>

	
<p>Battery Charging LED illuminates when connected to charger.</p>	<p>Charge Completed Bottom LED (Buttonless) turns off.</p>

Charger LED Functions

	Pro Tip
Connected to Power Battery illuminates when connected to power source.	Use the Kurvana charger included for best charge times.

Storing and Maintenance

- Detach cartridge from battery when not in use for extended periods of time.
- Store cartridge in cool and dim light with original packaging.
- Keep positive pins clean by using a cotton swab and rubbing alcohol.

Quick Troubleshooting

No Vapor?

When a cartridge is overtightened, the positive pin can recess inside the 510 connector. Use a small tool to pry out the center pin back to its original position.

Battery Not Charging?

Make sure the battery is not overtightened and the charger's positive pin has not recessed inside the 510 connector. Use a small tool to pry out the center pin back to its original position. Always use a Kurvana charger for optimum use.

Returns and Exchanges

In the rare event of a defect, you may return product to the original licensed retailer **up to 21 days** after purchase. We recommend calling the retailer prior to your arrival to ensure the defect falls under their exchange policy. If you experience any difficulties exchanging the defective product, email **hello@kurvana.com** for further assistance. We stand behind our products and want consumers to be 100% satisfied. Please visit our website at **kurvana.com** for our Returns and Exchanges Policy.

Key Battery Features

- Do not use battery or devices that appear damaged.
 - Do not remove oil from cartridge.
 - Do not remove or tamper with mouthpiece.
 - Do not drop, damage, or tamper with battery.
 - Do not over tighten cartridge or charger to battery or connect cartridge improperly.
 - Do not shake vigorously for extended periods of time.
-
- Do not draw consecutively for more than 3 puffs without giving cartridge time to cool down (approx. 2 minutes).
 - Chain vaping may cause health issues, overheating, malfunction, leaking, clogging, burns and / or injuries.
 - Do not expose cartridge or devices to extreme, sudden pressure changes.
 - Avoid direct sunlight or leaving product in a car on a hot, sunny day.
