Primary Cannabinoids

Our Collection offers unique formulations with curated ratios of rare cannabinoids. Read more to find out which ones might be right for you.

CBD (Cannabidiol)

Naturally non-psychoactive, CBD is one of the most highly discussed cannabinoids. Gaining quick popularity, CBD is commonly used to address anxiety, insomnia, and many chronic pains.

CBG (Cannabigerol)

Often referred to as the “Mother of all Cannabinoids,” CBG is the precursor to popular cannabinoids, THC, CBD, and CBC. CBG is known to improve mood, reduce inflammation, and is an anti-microbial.

CBN (Cannabinol)

A rising star in the world of cannabinoids, CBN is a mildly psychoactive cannabinoid often found in mature plants. CBN is naturally produced from THC degradation and may be used as a potential sleep aid.

THC (delta-9-tetrahydrocannabinol)

Popular among recreational cannabis users, THC, or the “superstar” of cannabis, is known for producing psychoactive effects. It is also known to have euphoric feelings, stimulate appetite and relieve anxiety.

Dosing our Tinctures

To start, place the oil under the tongue, holding it there 15 seconds before swallowing. Wait 1 hour before dosing again. Everyone is affected differently; the time it takes to see results and the amount you see will be unique from person to person. Starting low, assessing the feeling throughout the day or night, and adjusting accordingly is the best way to find the perfect dose.

0.25 mL
